

Criteria for ranking domains in search

When searching for a domain from any page of the site, the following rules apply:

- The most popular domain extensions (TLDs) in Bulgaria are ranked with the highest priority - .com, .bg, .eu. The first free name is displayed.
- In the second place in priority are the TLDs in promotion or the next most popular TLDs, again showing the first free name.
- When searching for a domain with a specific extension, a result is displayed - free or busy, and the proposed alternatives again follow the priority of the most popular or promotional TLDs.
- When a new domain extension goes on sale, it can also be ranked in the search results for promotion, in priority after the most popular TLDs, again showing the first free domain name.
